SCR35PL

find out more

- **Perfect for small to medium production run**
- **Short run label production in-house**
- **Produce full bleed labels easily**
- **Laminate labels for added durability**
- **Eliminate need to order pre-die cut label rolls**

The Scorpio Series are all-in-one systems that unwind, laminate for labels added durability (SCR22PL and SCR35PL only), digitally die-cut, remove the excess label material around each die-cut shape, slit, and rewind offering you everything to professionally cut and finish labels.

DIGITAL LABEL FINISHER SPECIFICATIONS

Input / Output max. Roll diameter	250 mm
Minimum media width	100 mm
Maximum media width	355 mm
Minimum slitting width	19 mm
Maximum cutting width	330 mm
Number of slitting blades	up to 13
Lamination module	YES
Dimensions	L = 200 cm H = 145 cm W = 70 cm
Weight (estimated)	245 kg
Roll core size	76 mm
Minimum/ Maximum label length	10 mm / 450 mm
Maximum media thickness	0.25 mm
Maximum cut speed	600 mm/s in all directions
Cut precision	0.3 mm
Warranty	One year parts & labor. Usage limitation may apply

All Scorpio systems provide a very accurate label finishing solution using cutting plotter technology. This allows you to cut different types of material and shapes on the fly without the added cost of dies.

The units are equipped with a cutter management tool that works together with a camera forming an integrated optical black-mark registration system providing cutting speed optimization and avoiding synchronization issues.

All features that turn into full flexibility, limitless variations in label design and smooth workflow.

Producing full bleed labels will no longer be a nightmare.

Print over-bleed artworks and enjoy the quality provided by our Digital Label Finishing System!

The Scorpio Series are digital label finishers truly meant to meet the on-demand short run label finishing solution for use with digital color label printers and presses.

Some benefits of using the Scorpio Series:

- Short run label production in-house means reducing inventory requirements and costs
- Producing full bleed labels will no longer be a nightmare
- Laminating for labels added durability (no need for special media)
- No need to order pre-die cut label rolls
- No need for ultra-precise label margin adjustment when printing in full bleed
- No need to set up a minimum gap between labels when printing in full bleed (saving on media)

Scorpio software works together with a camera forming an integrated optical black-mark registration system. Through the software, the operator imports the cutting file from Adobe Illustrator or Corel Draw and creates a black-mark inside the cutting file.

The camera detects the black-mark printed on the media and the software matches it with the black-mark created inside the cutting file. This process synchronizes when and where starting the job.
